Sequence 2, Application US/09796487

Patent No. 6830916

Batent No. 6830916

Batent No. 6830916

GENERAL INFORMATION:
APPLICANT: Spiegel, Sarah

TITLE OF INVENTION: Sphingosin Kinase, Cloning, Expression and Methods of Use
FILE REFERENCE: 07320001aa (2033957-0001)

CURRENT FILING DATE: 2001-03-02

PRIOR APPLICATION NUMBER: US 60/186,532

PRIOR APPLICATION NUMBER: US 60/186,532

PRIOR APPLICATION NUMBER: US 09/530,868

PRIOR FILING DATE: 2000-05-05

NUMBER OF SEQ ID NOS: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      186

FEATURE:
NAME/KEY: MISC_FEATURE
LOCATION: (1): .(381)
COTHER INFORMATION: SEQ ID NO 1 is the peptide sequence of SPHKIa in Figure 1, corres
OTHER INFORMATION: ponding to amino acid residue 124 to 504 of SPHKIa of GenBank seq
OTHER INFORMATION: Donding to amino acid residue 124 to 504 of SPHKIa of GenBank seq
OTHER INFORMATION: Usuance Accession Number AAC61697: SEQ ID NO 1 is equivalent to SEQ
OTHER INFORMATION: ID NO 4 that is the amino acid sequence of mSPHKIa in Figure 3.
PUBLICATION INFORMATION:
AUTHORS: Kohama et al.
TITLE: Molecular cloning and fuctional characterization of murine sphingosin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             126

SOFTWARE: Patentin version 3.1
SEQ ID NO 2
LENGTH: 388
TYPE: PRT
ORGANISM: Mus Musculus
FEATURE:
NAME/KEY: MISC_FEATURE
LOCATION: (1)..(388)
OTHER INFORMATION: SEQ ID NO 2 is the peptide sequence of SPHKIb in Fig. 1, corresponding to amino acid residue 1 to 388 of SPHKIb of GenBank sequency

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
```

RESULT 12

```
TYPE: PRT
ORGANISM: Mus musculus
PEATURE:
NAME/KEY: MISC_FEATURE
LOCATION: (1)._(373)
OTHER INFORMATION: SEQ ID NO 5 is the peptide sequence of Mouse SPHKIa in Fig. 2, co
OTHER INFORMATION: Tresponding to amino acid residue 131 to 504 of SPHKIa of GenBank
OTHER INFORMATION: sequence Accession Number AAC61697.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GRWDALVVMSGDGLMHEVVNGLMERPDWETAIQKPLCSLPAGSGNALAASLNHYAGYEQV 129

assembling sequences from s D31133, AA232791, W63556, AA FEATURE:
CTHER INFORMATION: Putative kinase sequence obtained by assembling sequences from the INFORMATION: everal human ESTS (accession numbers D31133, AA232791, W63556; OTHER INFORMATION: 081152 and AA026479).
NAME/KEY: MISC\_PEATURE
COCATION: (1)...(204); OTHER INFORMATION: Corresponding to peptide sequence Putative Human in Figure 2. US-09-796-487-9 GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               186 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Also described is an array of nucleic acid polymers immobilised on a solid support, comprising a solid support, at least two different nucleic acid polymers which are each specific for a different gene associated with lipid metabolism, synthesis or action, where each nucleic acid polymer is located at a predetermined position on the solid support, and

                                  This cDNA encodes a human sphingosine kinase (SK) protein. The human SK protein, encoding nucleic acids and modulators are useful for modulating expression, functional activity or cellular functional activity of sphingosine kinase in a subject and also for treating a mammal by modulating the activity of SK. Diseases treated by regulating SK cellulan activity include rheumatoid arthritis, asthma, atherosclerosis,
                                                                                                                                                                                                                                                                                                               9

the array comprises nucleic acid polymers which are specific for less than 100 genes other than the selected genes. The method is useful for determining tumour characteristics in a tissue sample taken from a patient. The present sequence represents a human lipid-associated generalated cDNA sequence, which is used in the exemplification of the
